Microsoft® selects eProcess Manager to showcase at their annual conference “Selling Desktop Solutions to Small Business” session at Fusion in Los Angeles, California on July 12

Long Beach, CA – Monday, July 15, 2002– Transition/1 Management Accounting Systems has announced they have been invited to present it's process and performance management software, eProcessManager, at Fusion, Microsoft's annual partner conference, in the “Selling Desktop Solution to Small Business” Session.

T/1MAS will be presenting eProcessManager at the Microsoft Fusion Conference, Los Angeles, from July 12, 2002 at 5:30PM. eProcessManager is a powerful tool for managing, measuring and strengthening an organization's operations. Using eProcessManager, management can construct step-by-step “processes” specifically designed to align to and realize the organization's vision and to meet strategic goals. With these processes in place, management can monitor performance and measure actual results against goals. In addition, managers can capture data from Great Plains software and can transfer information into Microsoft Visio® (for flow-charting), into Microsoft Project (for project planning), into Microsoft Excel (for data manipulation and reporting), and into HTML format (for publishing on a website).

“eProcessManager is the perfect tool for capturing, examining and restructuring a company's various processes,” said Kent Busse, CEO and founder of Transition/1. “So many business problems and opportunities are tied to processes. Whether an organization is growing or downsizing, every function – marketing, sales, operations or finance – is dependent on the effectiveness of its processes.”

“With eProcessManager, Transition/1 has delivered software that addresses fundamental business needs and leverages familiar Microsoft software.” said Guy Gilbert, Lead Product Manager for Microsoft Office. “This reduces the need for end-user training and allows for rich visualization of information, so that people can better understand business processes and issues.”

eProcessManager is available in three configurations: individual user, network and SQL-based enterprise. Purchase includes one-year of telephone support and software updates.

For more information on eProcessManager, visit www.eprocessmanager.com.

Microsoft provides business applications that help small and mid-sized companies become more agile in today's interconnected economy.

Transition/1 Management Accounting Systems, Inc. is a privately-held developer of strategic management software based in Long Beach, CA. Products include eProcessManager, Collection Manager 2001, Project Cost Manager and eComm.now.
